***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 46-51 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The current specification discloses a radiopaque marker that can be remotely visualized, and also discloses that the marker can comprise a biodegradable polymer. The current specification, however, fails to explicitly disclose: a mass that is detectable by at least two imaging methods; predetermined time periods for which the marker remains at the site; and the use of MRI and ultrasound to detect the marker.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 3736

4. Claims 46-51 are rejected under 35 U.S.C. 102(e) as being anticipated by Nash et al (5,411,520).

Nash et al disclose a hemostatic closure means and further disclose a mass of material that is detectable by at least two imaging detection methods; the mass remains at the site for at least a predetermined first time period after the introduction into the cavity and does not interfere with imaging during a predetermined second time period after the first time period; the mass remains imageable for at least the first time period and clears from the site during the second time period; and the marker is detectable by at least two of the following imaging methods: MRI, ultrasound, x-ray, mammography or fluoroscopy. See Column 5, lines 47-52 and 59-62; and Column 6, lines 10-15.

The disclosure of a radiopaque material inherently discloses the ability to remotely image the marker using x-ray and/or fluoroscopy. Furthermore, the ability of the material to degrade in a specified period of time would also inherently disclose the ability to image the site for a first predetermined time and not interfere with imaging during a second time period.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art of Kennedy (5,102,983) disclose bioabsorbable materials with radiopaque material for medical use.
